Agriculture 4.0 - New possibilities in agricultural landscape research -

Agriculture 4.0 means new agricultural production systems that fully utilize the advantage of information and communication technology. Agriculture 4.0 not only leads to more stable and resource efficient production of food, fibre and fuel, but enables the integration of aspects of nature conservation and ecosystem services, that was not in the focus of agricultural management practices. In this presentation, the possibilities of agriculture 4.0 regarding agricultural landscape research will be introduced by recent activities and projects at ZALF.

スライドは英語、講演は日本語で実施されます。

Presentation will be provided in Japanese. Slides on screen are shown in English.

卓越プログラム関係者に限らず、参加自由です。これからの農学・工学を考えるたいへん良い機会です。ご参加ください。
