17:30~17:40	Closing Remarks	Prof. Dr. <b>Norihiro Umeda</b> TUAT Trustee

## Content

Among 26 excellent programs adopted by MEXT, TUAT is the only university that focuses on smart agriculture and diversity. This program brings together world-class education and research capabilities—a collaboration of universities, research institutions, and private companies structured around the strengths of the individual universities. Based on this approach, the program develops excellent human resources capable of driving a variety of sectors in agriculture and engineering. For this purpose, we organize WISE seminars as an interdisciplinary node.

In this seminar, Dr. Kazuo Kyuma, president of the NARO and former member of the Council for Science, Technology, and Innovation (CSTI), will be invited to introduce the new developments in Japanese agricultural research strategy. In addition, Dr. Iida from Kubota Corporation and Mr. Fukunaga from AEON Agriculture Creation Co., Ltd will also join us to discuss the potential of radical innovation in the agriculture.
